

Honeywell

Create your
ultimate comfort
zone with
evohome

Smart zoning, intelligent scheduling and mobile control for your heating system.

Creating the perfect comfort zone.

With evohome, you are in charge. It makes managing your home heating simple, and could save you money on your energy bill too.

More comfort – you can easily control the temperature in any room or zone in your home, all from the comfort of your armchair.

More control – forget the old days when you had to get home to switch the heating on – with **evohome** you can do it from your smartphone.

Energy savings – If you have a system that allows you to control where and when you heat your home you are bound to make a difference to your energy bills.

Smart zoning for any heating system.

evohome means you're always in charge of your home heating system – wherever you are.

At its heart is the **evohome** controller, your simple to use control panel that lets you set the temperature in every room in your home – from anywhere in your home.

evohome works around your home, allowing you to add as many radiators or zones as you prefer.

Its modular design means you can easily and quickly smart zone your entire home from day one or add zoning later on.

Plus it will also fit just about any property, so whether you have underfloor heating, stored or shared hot water or even an on-demand boiler it will work for you too. And because the **evohome** is wireless, everything can be installed without any renovation.

Mobile Control

Control your heating system whenever you want, wherever you are.

In the old days you had to get home to switch on your heating. The evohome mobile app makes that a thing of the past.

Running late, or coming home ahead of schedule? With **evohome** you can turn your heating on or off, up or down, from your smartphone app.

Optimise your home for your comfort.

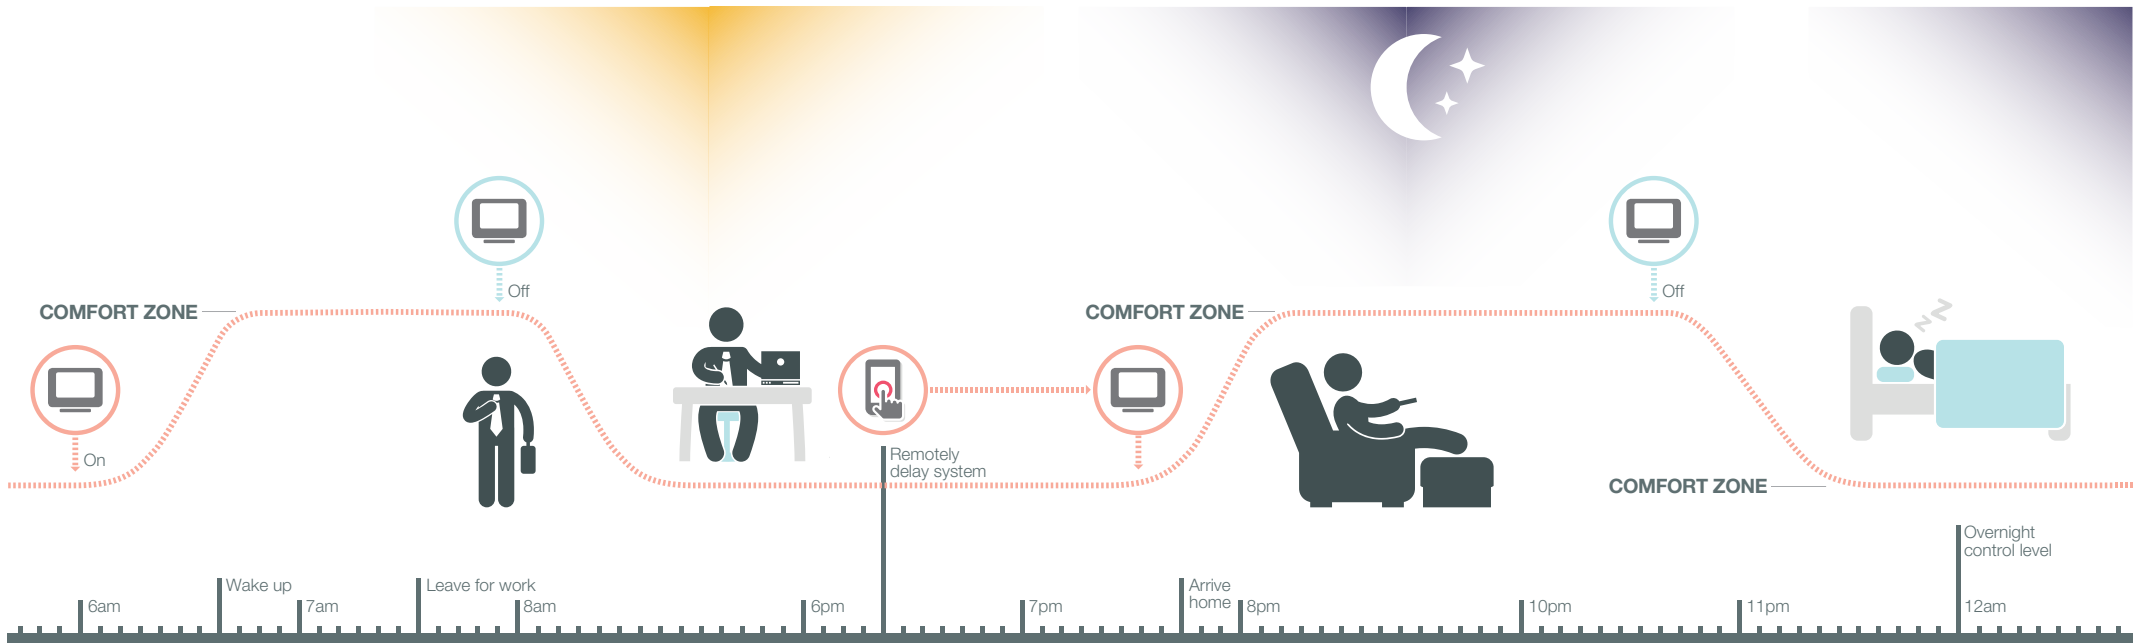

It's not just about switching your heating on and off. It's about setting the temperature for different times of the day, for every zone, for the whole week.

evohome lets you create your own heating schedule that reflects your lifestyle, and the way you use your home, precisely.

With our range of smart controllers you get to see and control exactly what temperature you want, from any part of your home.

evohome learns exactly how long your property takes to heat up, activating exactly when it needs to for your heating and hot water to be at the perfect temperature – just at the right time.

After a long day at work, **evohome** allows you to remotely control your heating so it's at the perfect temperature just in time for you getting home.

At night, **evohome** thinks ahead too. If you tell it exactly when you're planning on sleeping it will learn the optimal time when to turn the heating off, meaning you can sleep at the perfect temperature knowing you are saving money – everyday.

Save energy through better control.

82% of energy consumed in the home is used by heating and hot water. Reduce your heating bills by controlling your heating room by room for more control, comfort and efficiency.

Upgrading your basic timer and thermostat controls to **evohome** smart zoning could deliver as much as 40% savings on heating your home.

*Source Energy Saving Research Unit, Strathclyde University 2013 & TACMA 2013 – energy savings quoted were calculated using a 3 bedroom, 2 level home, located in the UK, modelling a family of 4 over a typical week's activity, comparing an evohome smart zoning system, with recommended settings, to a system comprising of a simple timer, single non-programmable room thermostat and no thermostatic radiator valves. Individual energy savings gained are dependent upon existing controls, environment and lifestyle.

Our products.

At Honeywell we know every home is different. So with our range of components you can customise your **evohome** to suit your property perfectly.

Central Controller

The smart hub of your heating system, it allows you to schedule, zone and personalise your warmth and hot water with its full-colour touch screen and simple menu.

Radiator Controller

Used to control the radiators they act as both sensors and controllers for your zones. Using two way wireless communication they are constantly learning about your home and in-touch with the main controller.

Gateway

Connects your **evohome** to a smartphone or tablet device using Honeywell's Total Comfort Connect app, giving you control over heating from wherever you are.

Design your perfect **evohome**.

Every home is different, so you can tailor your evohome to suit.

Radiator heating or underfloor heating? Stored hot water? Whether you live in a small apartment or a family home, **evohome** can help you take more control of your heating and hot water.

See how **evohome** fits your home for yourself with our interactive online System Builder. It'll tell you what components you'll need to create your perfect comfort zone.
